

Technical Data Sheet

WSFTE Colombia 2024

The World Social Forum for Transformative Economies is a space and process that is part of the process of the World Social Forum (WSF), the largest gathering of civil society to find solutions to the problems of our physical, material and spiritual territories in these times. Directly inspired by the WSF and its Charter of Principles WSF, the WSFTE is an open space of meetings about transformative economies, to intensify reflection, to carry out a democratic debate of ideas, to elaborate proposals, to establish an exchange of experiences and to articulate effective actions, establishing epistemological bridges based on trust and love, pointing out the role of transformative economies in the construction of a world where several worlds, other worlds, different multicultural worlds coexist.

Objective

The World Social Forum of Transformative Economies is a process of dialogues at the international level. Confluence between organizations, initiatives and movements of community, popular, social solidarity, feminist, commons, peasant, indigenous and afro-descendant economies.

The objective is to recognize each other from the complementarities and common objectives to the transforming economies, in order to develop articulations to give answers to our local/global challenges.

We are making an international call for the organization, design and configuration of the preparation process.

The event will be generically an open space of several days, welcoming the participation of organizations coming from all over the world to dialogue in self-organized activities and to make visible and promote their action initiatives aiming at the visibility and development of transformative economies in their various expressions.

We will seek to ensure the technical and organizational infrastructure and the encouragement for the use of an inclusive online participation modality, with online interpreters, in addition to face-to-face participation.

The FSMET 2024 event is also conceived as a manifestation of a decentralized and permanent process, with mutual visibility among participants and their dialogue activities and initiatives with possible dates for public action before and after the event.
